Algorithms by Example

Theo Graph

Synthetic test edition: not a real book

Chapter 1 Sorting

1.1 Merge sort

This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages.

Chapter 2 Graph Search

2.1 Breadth-first search

This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages.

```
def search(graph, start):
    seen = {start}
    for node in graph[start]:
        ...  # recursion
```

Chapter 3 Dynamic Programming

3.1 Memoisation

This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages.
