Sparse Graphs for Fast Search: A Synthetic Study (Preprint)

Ana Node, Bo Edge

Abstract. We study sparse graphs built only for testing. This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages.

1 Introduction

This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages. This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages.

2 Related Work

This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages. This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with.
