Thermal Lensing in a Synthetic Laser Rod

Ivo Photon, Rhea Wave

Abstract. A synthetic laser rod forms a thermal lens. This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages.

1 Introduction

This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages. This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages.

2 Model

This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages. This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages.

Table 1. Synthetic thermal lens

Power	f (m)
10 W	2.1
20 W	1.0

3 Measurements

This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages. This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages.

4 Discussion

This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages. This paragraph is synthetic text written for the myLibrary test corpus. It has no meaning beyond giving the reader, the search index and the notes panel something to work with. Words such as aperture, convergence, eigenvalue, recursion, membrane and archive appear so that searches find them on known pages.

$$\frac{1}{f} = \frac{1}{s} + \frac{1}{s'} \tag{1.1}$$

$$n_1 \sin \blacksquare = n_2 \sin \blacksquare \tag{1.2}$$
